This listing of claims will replace all prior versions, and listings, of claims in the

application:

Listing of Claims:

1. (currently amended) A method of making a liquid applicator, the

applicator shaped for receiving a frangible ampoule containing a liquid to be applied, the method

comprising:

providing a substantially hollow body adapted to receive at least one

ampoule; and

providing at least one ampoule containing a liquid to be applied received

within said body; and

positioning at least one porous element comprising colorant such that

liquid flows through said element when the at least one ampoule is fractured and

at least some of the colorant is transferred to the liquid to be applied.

2. (original) The method of claim 1, wherein the at least one porous element

is a porous pad.

3. (original) The method of claim 1, wherein the at least one porous element

is a porous plug.

4. (original) The method of claim 1, further comprising:

coupling to said body at least one mechanism for fracturing the at least

one ampoule.

Page 3 of 10

- 5. (original) The method of claim 4, wherein the at least one mechanism flexes said body inwardly to exert a fracturing force against the ampoule.
- 6. (original) The method of claim 5, wherein the at least one mechanism includes elongated gripping members which are diametrically opposed and project from the body.
- 7. (original) The method of claim 5, wherein the at least one mechanism is a lever.
 - 8. (currently amended) The method of claim 1, further comprising: securing to said body a porous pad, said pad positioned to close off saidan open end of said body, such that liquid flows into said body and through said element when the ampoule is fractured.
 - (original) The method of claim 1, further comprising:
 saturating the at least one porous element with colorant.
 - 10. (original) The method of claim 9, further comprising: allowing the at least one porous element to dry.
 - 11-16. (cancelled)
- 17. (new) A method of making a liquid applicator, the applicator shaped for receiving a frangible ampoule containing a liquid to be applied, the method comprising:
 - providing a substantially hollow body adapted to receive at least one ampoule;

coupling to said body at least one mechanism for fracturing the at least

one ampoule; and

positioning at least one porous element comprising colorant such that

liquid flows through said element when the at least one ampoule is fractured and

at least some of the colorant is transferred to the liquid to be applied

18. (new) The method of claim 17, wherein the at least one mechanism flexes

said body inwardly to exert a fracturing force against the ampoule.

19. (new) The method of claim 18, wherein the at least one mechanism

includes elongated gripping members which are diametrically opposed and project from the

body.

20. (new) The method of claim 18, wherein the at least one mechanism is a

lever.
